

AI POLICIES & COMPLIANCE

Put AI to work across your business — without leaving data protection, accountability and control to chance

Many mid-sized companies already use AI in their day-to-day work — usually without clear rules. KrambergAI provides a clear, practical framework that gives management, employees and departments the guidance they need.

⚠ The Problem

AI is often adopted faster than companies can put rules in place.

- No consistent rules for how AI may be used
- Uncertainty around data protection and confidential information
- Unclear accountability for AI-generated content
- Missing approval processes for customer communication
- No overview of the AI tools in use
- Concern about uncontrolled tool sprawl

✅ The Solution

A practical framework for safe and responsible use of AI.

- ✓ Clear AI policies and simple rules of use
- ✓ Defined approval processes for reviewed results
- ✓ Permitted, restricted and unsuitable areas of use
- ✓ Data protection, organisation and processes aligned

GUIDING QUESTIONS

"Which tools may employees use?" · "Which data must never go into external systems?" · "When must results be reviewed?" · "Who is responsible?"

📈 The Benefit

Policies don't make AI more cumbersome — they make it safer and easier to steer.

- ✓ More control over tools, risks and responsibilities
- ✓ Less uncertainty for employees and managers
- ✓ Lower risk with customer and internal data
- ✓ Traceable approval and review processes
- ✓ A solid basis for CompanyGPT, AI telephony & automation
- ✓ Better readiness for regulatory requirements

How it works

Starting point: a compact AI policy check

1

Assess the status quo

Capture tools, use cases and data types in use

2

Evaluate risks

Classify data by sensitivity & derive guardrails

3

Define rules of use

Set permitted tools, data and review obligations

4

Assign roles

Clearly define responsibility, approval and review

5

Create the policy

Document a quick-start guide, checklist & tool overview

6

Roll out & evolve

Discuss with staff & refine on an ongoing basis

Who it's for

- › Managing directors of mid-sized firms
- › Businesses with sensitive customer & project data
- › Companies running their first AI experiments
- › Teams preparing CompanyGPT & AI telephony

TYPICAL INDUSTRIES

Skilled trades Construction Technical services Security services
Traffic safety Facility services Industry & trade

NEXT STEP

Request your AI policy check

We review the tools in use, the data involved and the rules you need first — then build a practical framework around them.
